

The National Assessment of Educational Progress (NAEP) assesses mathematics in five content areas: number properties and operations; measurement; geometry; data analysis and probability; and algebra. The NAEP mathematics scale ranges from 0 to 500.

Overall Mathematics Results for New Jersey

- In 2007, the average scale score for eighth-grade students in New Jersey was 289. This was higher than their average score in 2005 (284) and was higher than their average score in 1990 (270).¹
- New Jersey's average score (289) in 2007 was higher than that of the nation's public schools (280).
- Of the 52 states and other jurisdictions that participated in the 2007 eighth-grade assessment, students' average scale score in New Jersey was higher than those in 35 jurisdictions, not significantly different from those in 14 jurisdictions, and lower than those in 2 jurisdictions.²
- The percentage of students in New Jersey who performed at or above the NAEP *Proficient* level was 40 percent in 2007. This percentage was greater than that in 2005 (36 percent) and was greater than that in 1990 (21 percent).
- The percentage of students in New Jersey who performed at or above the NAEP *Basic* level was 77 percent in 2007. This percentage was not significantly different from that in 2005 (74 percent) and was greater than that in 1990 (58 percent).

NOTE: The NAEP grade 8 mathematics achievement levels correspond to the

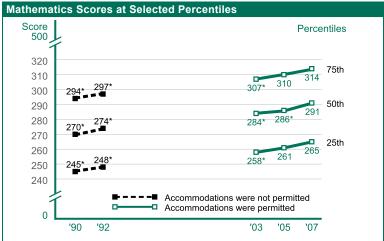

following scale points: Below Basic, 261 or lower; Basic, 262-298;

Proficient, 299-332; Advanced, 333 or above.

Performance of NAEP Reporting Groups in New Jersey: 2007						
	Percent	Average	Percent	Percent of students at or above		Percent
Reporting groups	of students	score	below Basic	Basic	Proficient	Advanced
Male	51	290	23	77	43	12
Female	49	288 ↑	22	78	38	9
White	57	298	13	87	51	14
Black	17	264	45	55	14	1
Hispanic	19	271	37	63	20	2
Asian/Pacific Islander	7	314	7	93	69	30
American Indian/Alaska Native	#	‡	‡	‡	‡	‡
Eligible for National School Lunch Program	27	266	43	57	17	2
Not eligible for National School Lunch Program	71	297 ↑	14 ↓	86 ↑	50	14

Average Score Gaps Between Selected Groups

- In 2007, male students in New Jersey had an average score that was not significantly different from that of female students. In 1990, there was no significant difference between the average score of male and female students.
- In 2007, Black students had an average score that was lower than that of White students by 35 points. In 1990, the average score for Black students was lower than that of White students by 38 points.
- In 2007, Hispanic students had an average score that was lower than that
 of White students by 27 points. This performance gap was narrower than
 that of 1990 (37 points).
- In 2007, students who were eligible for free/reduced-price school lunch, a
 proxy for poverty, had an average score that was lower than that of
 students who were not eligible for free/reduced-price school lunch by 31
 points. In 2003, the average score for students who were eligible for
 free/reduced-price school lunch was lower than the score of those not
 eligible by 34 points.
- In 2007, the score gap between students at the 75th percentile and students at the 25th percentile was 49 points. In 1990, the score gap between students at the 75th percentile and students at the 25th percentile was 49 points.

NOTE: Scores at selected percentiles on the NAEP mathematics scale indicate how well students at lower, middle, and higher levels performed.

Rounds to zero.

- ‡ Reporting standards not met.
- * Significantly different from 2007.

- † Significantly higher than 2005. | Significantly lower than 2005.
- ¹ Comparisons (higher/lower/narrower/wider/not different) are based on statistical tests. The .05 level was used for testing statistical significance. Statistical comparisons are calculated on the basis of unrounded scale scores or percentages. Comparisons across jurisdictions and comparisons with the nation or within a jurisdiction across years may be affected by differences in exclusion rates for students with disabilities (SD) and English language learners (ELL). The exclusion rates for SD and ELL in New Jersey were 3 percent and 1 percent in 2007, respectively. For more intormation on NAEP significance testing see

 $\underline{http://nces.ed.gov/nationsreportcard/mathematics/interpret-results.asp\#statistical}.$

² "Jurisdictions" refers to states and the District of Columbia and the Department of Defense Education Activity schools.

NOTE: Detail may not sum to totals because of rounding and because the "Information not available" category for the National School Lunch Program, which provides free and reduced-price lunches, and the "Unclassified" category for race/ethnicity are not displayed. Visit http://nces.ed.gov/nationsreportcard/states/ for additional results and detailed information.
